SUMMARY

Computer Science undergraduate (CGPA: 9.18) building full-stack AI systems: on-device LLM inference for Android, WebRTC-based cross-device control, and adaptive AI tutoring tools. Proficient in Python, Kotlin, React, and LangGraph, with hands-on experience taking projects from architecture through testing to working, demoed products.

TECHNICAL SKILLS

Languages: Python, Java, C, HTML, CSS, JavaScript, Kotlin, SQL
AI/ML: LLMs, RAG, Agentic AI, NLP, Generative AI, LoRA, Local AI
Frameworks: React.js, Jetpack Compose, Flask, Node.js, LangGraph
Systems: Distributed Systems, P2P Networking, WebRTC, API Design, Event-Driven Architecture
AI & Android: llama.cpp, Hugging Face, Android APIs, Room, DataStore, SQLite
Tools: Git, GitHub, VS Code, Figma, Claude Code

EXPERIENCE

AI Engineer & UI/UX Developer Intern Feb. 2026 – May 2026
OrionAC Remote

- Built LLM inference workflows using LoRA-adapted models served via Flask APIs, converting natural-language user requirements into structured, task-specific outputs consumed by downstream product features.
- Designed the interface between model reasoning and application logic, defining the request/response contract that let front-end features consume LLM outputs reliably.
- Built interactive AI interfaces in React with GSAP and Framer Motion, adding real-time feedback and animated state transitions to core product workflows.

PROJECTS

NEMO – Visual AI Learning Platform | *React, TypeScript, LangGraph, Manim, Mermaid, LLMs*

- Built an AI learning platform that converts questions, problems, documents, and images into interactive visual lessons using LangGraph orchestration and Manim/Mermaid rendering, replacing static text answers with a classroom-like experience.
- Implemented a two-way teaching loop: NEMO explains concepts visually, quizzes the learner, evaluates responses, and adjusts explanation depth and pace based on demonstrated understanding.
- Tested with **10 users** on interactive lessons including binary search; incorporated feedback to refine the adaptive teaching and visual explanation logic.

WAVY'S – AI Phone Capability Platform | *Kotlin, Jetpack Compose, Qwen3-0.6B, llama.cpp, Android APIs*

- Built a local, on-device AI platform for Android that composes existing phone capabilities — sensors, notifications, biometrics, location, apps, widgets, and system controls — into new, user-defined capabilities.
- Integrated Qwen3-0.6B via llama.cpp for on-device natural-language interpretation, mapping free-form feature requests to composable device capabilities entirely offline.
- Validated the composition system end-to-end by testing **10+ newly created capabilities** spanning privacy controls, contextual actions, and device automation.

SAKHI – Cross-Device AI Computer Ecosystem | *React Native, Electron, WebRTC, P2P, AI*

- Built a cross-device AI workspace connecting a phone and computer, turning the phone into a secure remote control and AI command center for desktop operations.
- Designed a WebRTC/P2P communication layer with signaling and TURN fallback, enabling remote screen access, file operations, terminal commands, and clipboard/system control.
- Implemented a trusted-device security workflow — pairing, authentication, authorization, confirmation, execution, and verification — to gate sensitive remote computer actions.

ACHIEVEMENTS

- Smart India Hackathon 2025** – Internal Top 50 Finalist
- GeeksforGeeks** – Certified in Generative AI, Java Programming, and Python Programming
- Coursera** – AI Specialization: Brainstorming, Data Analysis, Research & Insight, Communication, and Content Creation

EDUCATION

Vishnu Institute of Technology <i>B.Tech in Computer Science and Engineering, CGPA: 9.18</i> Tirumala Junior Kalasala <i>Intermediate – MPC, 92.1%</i>	Bhimavaram, India <i>August 2024 – May 2028</i> Andhra Pradesh, India <i>June 2023 – May 2024</i>
